“Shared risk factors for cardiovascular disease and dementia – epidemiologic, genetic and causal aspects”

Ruth Frikke-Schmidt, MD, DMSc, PhD
Chief Physician, Clinical Research Associate Professor
Department of Clinical Biochemistry KB 3-01-1
Rigshospitalet, University of Copenhagen

Major contributors to morbidity and disability in aging populations are cardio- and cerebrovascular disease and dementia. These disease-entities are highly interrelated, however large fractions of the underlying pathogenesis are not well understood. Robust data on epidemiologic, genetic and causal associations will increase our understanding of the interrelationship between cardio- and cerebrovascular disease and dementia, and will have the potential to make the basis for targeted preventive strategies and treatment.

Thursday, November 16, 2017
10:00am – 11:00am
Gonda Building 1st Floor Conference Room, 1357
Light snack will be provided

To meet with Dr. Ruth Frikke-Schmidt, please contact:
Host: Dr. Paivi Pajukanta, ppajukanta@mednet.ucla.edu
