BE PART OF A MAJOR NEW STUDY ON BRAIN CONNECTIONS ACROSS CHILD DEVELOPMENT

The Lifespan Human Connectome Project Development (HCP-D) Study will enroll 1,300+ healthy children and adolescents to discover how different parts of a child’s brain are connected and how these connections (the “connectome”) change as the brain develops.

Who can participate?

- girls ages 9 and 13, and boys ages 10 and 14 and their parents

What will participants do?

There are 2 study visits. During these visits, you and your child will be asked to:

- Complete interviews
- Questionnaires
- Play iPad games
- Give Saliva
- Undergo a safe non-invasive MRI scan
