“Neural mechanisms of aggression”

Friday, May 3, 2019  
12:00 p.m.  
23-105 CHS

Abstract:  
Aggression is an innate social behavior essential for competing for resources, securing mates, defending territory and protecting the safety of oneself and family. In the last decade, significant progress has been made towards an understanding of the neural circuit underlying aggression using a set of modern neuroscience tools. Here, I will talk about our recent progress in the study of aggression.
