Are you interested in participating in a research study for your child aged 2-7 years old?

If your child has autism spectrum disorder or is typically developing, both you and your child can participate in the Tracking Health in Kids (THinK) study. This study aims to compare behavioral responses to health and life events in typically developing children and children with autism in early childhood. This is a study done by the University of California, Los Angeles (UCLA) and the University of California, San Francisco (UCSF).

What will I receive?

You and your child can receive up to $400 from UCLA upon completion of the study.

What do I have to do?

You will be asked to complete an intake and exit interview at UCLA. Afterward, you will be asked to record your child’s health over the course of three months through a smartphone application.

How do I get involved?

You can call Katherine Byrne at UCLA Semel Institute at (310) 206-6628 or send an email to kabyrne@mednet.ucla.edu to schedule a phone screening. Please let her know if you’re interested in participating in the THinK study.
