Having trouble taking your HIV medication every day?

Might MONTHLY injections be right for you?

A5359 UCLA Health
This study is for people living with HIV to determine if **LONG-ACTING, MONTHLY INJECTABLE** medications will be more successful at keeping the viral load undetectable than the "standard" daily oral medications for people who have difficulty taking pills every day for HIV.

**Eligibility:**
- 18 years of age or older
- HIV + and have a **DETECTABLE** viral load
- Have trouble taking HIV medication regularly
- The study will last between 6 months and 3 ½ years depending on successful completion of each milestone in the study
