Biomarkers in Neurodegenerative Disease

Join our study to advance the future of brain health research

What is this study about?
The aim of this study is to collect a large amount of information from tests of brain function and cognitive performance over a period of time to help researchers learn more about and develop new therapies for neurodegenerative diseases.

Research Procedures
- Cognitive Examination
- Caregiver Interview
- Medical and Neuropsychological Exam
- Genetic Counseling
- MRI
- Blood Draw
- Overnight Sleep Study
- Optional Lumbar Puncture
- Optional Amyloid Beta and Tau PET

What will happen if I choose to participate in this study?
Once you determine your interest to participate in this study, you will first do a screening to determine eligibility for the study. Should you meet the criteria to participate, you will undergo the following procedures either during the initial visit or on an annual basis.

Is this study right for me?
You may be eligible to participate in this study if you meet the following criteria:
- A Healthy Volunteer
- You were diagnosed with one of the following:
  - Mild Cognitive Impairment
  - Alzheimer's Disease
  - Dementia with Lewy bodies
  - Parkinson's Disease Dementia
  - Frontotemporal Dementia and related conditions such as Progressive Supranuclear Palsy and Corticobasal Degeneration
  - Transient epileptic amnesia
  - Adult-onset Epilepsy

How long will I be in this study?
We expect that you will be in this research study until you are no longer able to participate in cognitive testing. This may mean 2 to 5 annual visits.

Who will be with me in this study?
We plan to enroll 200 new participants annually to participate in this study.

Interested in participating?
If you're interested in joining our study please contact our study coordinator, Aisha Mohammed. Phone: 310-825-2600 Email: amohammed@mednet.ucla.edu.
